

2019/20 Clinical Research Specialty Objectives

1. To develop local CRN schemes/programmes for promoting and improving early career researcher (ECR) involvement in NIHR research

2. To increase opportunities for people to participate in health research in less established specialties (<70 open studies on the NIHR CRN Portfolio in April 2018)

3. To broaden participation within well-established specialties, particularly in areas or groups who have historically been underrepresented on the NIHR CRN Portfolio

4. To ensure specialty or sub-specialty representation and leadership is embedded in all LCRNs

5. To record the age (or year of birth) of participants recruited into NIHR CRN Portfolio studies in order to assess the extent to which recruitment age profiles match the age demographics of the incidence/prevalence of diseases
