

Greater Manchester Clinical Research Network

New RDM and Specialty Structure

Rationale

- Since the inception of CRN GM in April 2014, the clinical Leadership of the network has operated with a fixed 6 Divisional Lead and 30 Specialty Lead Structure.
- This structure was originally put in place to align with the 6 Research Delivery Managers, overseeing the performance and supporting the growth of a set group of clinical specialty areas.
- Due to an evolution of the GM network there has been a reduction in the number of RDMs, and introduction of other managerial posts. There has also been the recent resignation of the Division 5 and Division 6 Leads.
- It is recognised that this group have provided continued strong leadership and invaluable input to the strategic direction of the CRN GM over the past 4 years. Many also hold leading national roles within the Cluster Structures of the Network and out with the NIHR and CRN GM do not want to lose their input.
- The Divisional label is removed, and realignment of specialities amongst the 4 remaining Leads, as our Clinical Research Leaders.
